
✓ Progress Tracker — 10시간 디지털 제조(출력) 사전학습

Session 1 (2h) — Slicer Basics: STL → G-code

- ☐ Can explain STL → slicer → G-code → printer
- ☐ Set correct printer + filament profile
- ☐ Sliced one model and read its time/material estimate

Session 2 (2h) — Print Settings & Common Defects

- ☐ Can explain layer height / infill tradeoffs
- ☐ Compared time/material across 2+ layer heights and infill densities
- ☐ Can name likely fixes for warping, stringing, bad first layer

Session 3 (2h) — Orientation & Supports

- ☐ Can state the ~45° overhang rule of thumb
- ☐ Compared support volume across 2+ orientations
- ☐ Chose and justified final orientation for enclosure base + lid

Session 4 (2h) — Post-Processing

- ☐ Removed supports and cleaned a seam line
- ☐ Understands progressive-grit sanding
- ☐ Can describe test-fit-and-adjust workflow for tight holes

Session 5 (2h) — Capstone: Slice → Print → Post-Process

- ☐ Sliced both parts with justified settings
- ☐ Completed or fully documented a print run
- ☐ Post-processed and test-fit lid to base
- ☐ Can walk through the full design→print→assemble pipeline end to end

Ready for 디지털 제조(출력) internship prerequisite when all boxes above are checked.
