
✓ Progress Tracker — 10시간 3D 설계(CAD) 사전학습

Session 1 (2h) — Sketch Fundamentals & Constraints

- ☐ Can explain geometric vs dimensional constraints
- ☐ Produced one fully constrained sketch (rectangle + circle)
- ☐ Understands why under-constrained sketches get rejected on a team

Session 2 (2h) — 3D Features & Part Modeling

- ☐ Can extrude and explain symmetric vs one-sided
- ☐ Produced a shelled, filleted enclosure body
- ☐ Used Revolve at least once

Session 3 (2h) — Assembly & Joints

- ☐ Can explain body vs component
- ☐ Understands Rigid / Revolute / Slider joints with real examples
- ☐ Assembled 2+ components and ran an interference check

Session 4 (2h) — Parametric Design & Tolerancing

- ☐ Created and used 3+ named user parameters
- ☐ Can explain tolerance rules for holes vs press-fits
- ☐ Verified model updates correctly on parameter change

Session 5 (2h) — Capstone: Sensor Enclosure + Export

- ☐ Base + lid modeled as separate joined components
- ☐ Parametric wall thickness + mounting-hole tolerance
- ☐ Both parts exported as STL
- ☐ Can identify sketching / features / joints / parameters in the finished file

Ready for 3D 설계(CAD) internship prerequisite when all boxes above are checked.
