
Project — 3D Design (CAD)

Build your own end-of-subject project here once all 5 sessions are done.

Suggested scope: go beyond the Session 5 enclosure — e.g. design a multi-part assembly with a snap-fit or screw-fit lid, or model a housing for your actual Arduino project above. Pick something that maps to the on-site work: 부품·하우징 모델링, 조립·치수 설계.

Suggested layout as you build it:

```
project/  
├─ notes.md          <- design goals, dimensions, tolerance decisions  
├─ source/           <- Fusion 360 files (.f3d / .f3z)  
└─ exports/          <- STL/3MF exports for printing
```

This folder is intentionally empty otherwise — it's yours to fill in.
